                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (fatty acylifatty alcohol acylitansferse) and fatty acyl reductase entyres respectively. The DNA encoding these protein were used in hearthogous DNA sequence on actually associated with it. This construct may be used to produce crop plants having a convenient source of wax setters. As acters on be used in a variety of industrial applications, including pharmaceuticals commentes in crop plants alpations and including pharmaceuticals commentes in crop plants also setters was actered to the commenter of comments of the commenter o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  426 Illrivd 432

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      co high new SHI binding spents. They represent a bissed phase library control with comprises five random anno cide fanking the decapspited control was a control with the sequence of this. Which was identified as a consection sequence for the set SHI domain. These sequences were contacting the sHI domain with a mixture of the periodes under conditions contacting the SHI domain with a mixture of the periodes under conditions contacting a ligand to bind to an SHI domain to form a comprise. Any combound periodes are removed and the complexed periode ligands are discontacted from the complexes. The selected periodes are northed by contacting them with the SHI domain and then conditions or chastes the SHI domain are detected. The isolated SHI binding periodes are with the SHI domain and the conditions of chastess contacting the with the SHI domain and the conditions transitions or diseases. Once diseases include page's disease. Other conditions transition to the second state of the second state of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PF 01-NOV-1995, JP-22318.

The inhibitors can be used to inhibit transcription of DNA, that codes for proteins that can be harmful to mammals, especially humans, e.g. to treat viral indections (e.g. https://doi.org/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com/10.1001/j.com

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        r 43
ul987s standard: peptide: ...
ul987s; sequence for use in Tlymphocyte veto molecule.
Ladder sequence for use in Tlymphocyte veto molecule: ladder seq
Tlymphocyte veto molecule: chineric molecule: ladder seq
Tlymphocyte veto molecule: ophineric molecule: ladder seq
targetting polypeptide: suppression: immune response: transplant rejection.
transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibacterials. (A) may also be used to orphan receptors and, when attached to localise quantify specific receptors. test efficacy/toxicity of (A) and as specific and selective, against the I should have few side effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21

The alpha-glucuronidase protein is used to improve dough and baked products. The protein can also be used to treat callinate pulp to remove at least some of the glucuronic acid residues present in it, as a slasing additive and to degrade pulp to the acid matter generally. When added to salimal feed (particularly waste products of annual plants such as beet pulp, cereal beam or stray) the protein increases feed utilisation and feed conversion rate, particularly by increases feed utilisation and feed conversion rate, particularly by Sequence 33 Ab;

                                                                                                                                          acid sequences predicted from various OFF were analysed for significant homology to other known or exported membrane protesins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production. e.g. in E. coli hosts.
                                                                             0

COMMENT

COMMENT chains and two catalytic chains. Activation by other produces we active catalytic monomers and a repulatory differ that blads four cathy molecules.

Four types of regulatory chains are found: I alpha. I beta, II beta, II beta, II beta, II beta, II beta, II cathy and III beta. That are the pression varies among tissues and II alpha, and III beta. That are phosphorylated by the activated of the production of the activated phosphorylated by the activated phosphorylated by the activated phosphorylations by that thighcal significance of phosphorylations by the thigh cathers association by binding to amboring proceins, including the MAP Athras. The ambion process in including the MAP Athras. The

           901945 etype fragment myosin catalytic light chain, ventricular and slow striated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Dougherty, B.A.; McKenny, K.; Adams, M.D.; Loftus, STREPTOMYCES LIVIDANS. PROKARIOTA: FIRMICUTES; ACTINOMYCETALES; STREPTOMYCETACEAE.

SEQUENCE PROM N.A.
MEDILHE; 88085669.
ADMHS C.M., FORWARLD J.A., SCHMIDT P.J., ROSENBERG M., BRAWKER M.E.;
J. BACTERIOL. 170:203-212(1988).

RP IDENTIFICATION OF PROBABLE FRAMESHIPTS.

RA CIBSON T.J.;

RA CIBSON T.J.;

RI UNPUBLISHED OBSERVATIONS (MAR-1995).

CC --- CANALTYIC ACTIVITY: ATP + D-GALACTOSE - ADP + D-GALACTOSE

CC --- PATRHAN: ETIST TEACTION OF GALACTOSE METABOLISM (LEIGH PATRHAY).

CC --- PATRHAN: ETIST TEACTION OF GALACTOSE METABOLISM (LEIGH PATRHAY).

CC --- CAUTION: REF. 1. SEQUENCE DIFFERS FROM THAT SHOWN IN POSITIONS 49

CT D 63, 181 TO 244, AND 288 TO 310 DE TO FAMESHIPTS.

SUBSTITED (JAN-1995) TO ENGL/GERBANK/DDSJ DATA BANKS.

-1- PROWCTION: RECEPTOR FOR PROSTACLANDER 2 (PG22). THE ACTIVITY OF
THIS RECEPTOR IS MEDIATED BY G-S PROFERIS THAT STIMULATES
ADBITIATE CYCLASE. THE SUBSEQUENT BASES IN INTRACELLAR CAMP I
RESPONSIBLE FOR THE RELAXING EFFECT OF THIS RECEPTOR ON SHOOTH R CAMP IS

1- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.
1- TISSUE SPECIFICITY: PLACENTA AND LUNG.
1- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED

G_PROTEIN_RECEPTOR: 1.
RECEPTOR: TRANSMEMBRANE: GLYCOPROTEIN
EXTRACELLULAR (POTENTIAL).
